

Hugh Burrows is Full Professor in the Department of Chemistry, University of Coimbra, Portugal. He is a native of England and did his first degree (University of London) and Ph.D. (University of Sussex) there. He has since worked in Universities in the UK (Warwick), Israel (Tel-Aviv), Nigeria (Obafemi Awolowo) and Portugal (Coimbra). He has been in Portugal for nearly 30 years, and his research has concentrated on various aspects of materials chemistry, polymers and photochemistry. Much of his current research concentrates on photophysical and aggregation behaviour of conjugated polymers. He particularly interested in their potential in nanostructuring and artificial photosynthesis. He is *Sócio Correspondente* of the *Academia de Ciências de Lisboa* and Fellow of the Royal Society of Chemistry. He is author/co-author of 5 books, various book chapters and over 300 scientific articles (h index 32).
